Introduction

Zygote Media Group, Inc., provides high quality 3D content for use in multimedia products. Our focus is on the difficult to build 3D models and texture maps; servicing production houses and animators with modeling talent or ready made catalog models available at a moments notice. Our work is frequently used in computer games, feature films, broadcast media, courtroom animation and corporate training.

Our customers have found us to be loyal, providing helpful customer service in a timely, cost effective manner. When you need 3D content, we can support you in one of the following ways:

Custom Modeling and Texture Mapping
You will find our bid process to be easy and efficient. We can provide a quick estimate for models or textures, built to order based on your description. In most cases a same-day bid can be submitted when drawings or photos are faxed or e-mailed to us. We can custom build Nurbs or Polygonal models and we support all major formats.

Semi-Custom Modeling
We offer a semi-custom modeling service. This involves using pre-existing models from our library to develop a new model that more closely fits your needs. This affords increased flexibility when your production budget may not be so flexible. We can reduce or increase resolution, or detail, modify faces or expressions, change clothing and accessories, apply textures, or change the models in just about any little way you may need.

Stock 3D Model Library
Our library is filled with hundreds of high quality 3D models. We have a variety of humans, animals, characters, furniture, 3D clip-art and many other 3D models. Many of our stock models are a available through other distributors such as Viewpoint Datalabs (catalog) and Acuris (18 perfect People tm Acuris).

3D Model Collections
We have four CD rom model collections. The Mix and Match collection contains high resolution male and female models with interchangeable articles of clothing and hairstyles. The Zygote Sampler CDs contain a variety of over 100 models per CD. The Head and Hair collections contain several different heads and hairstyles that can be added to the Mix and Match characters and the 18 Perfect People models.

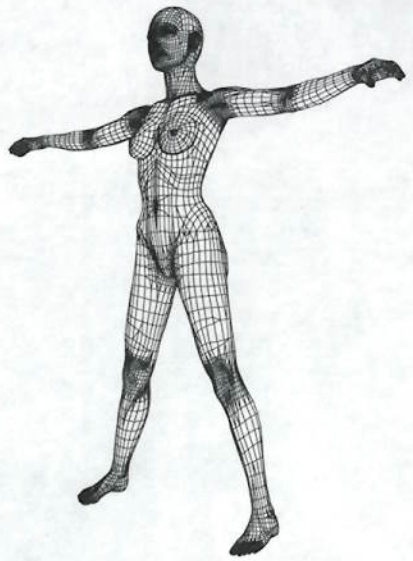
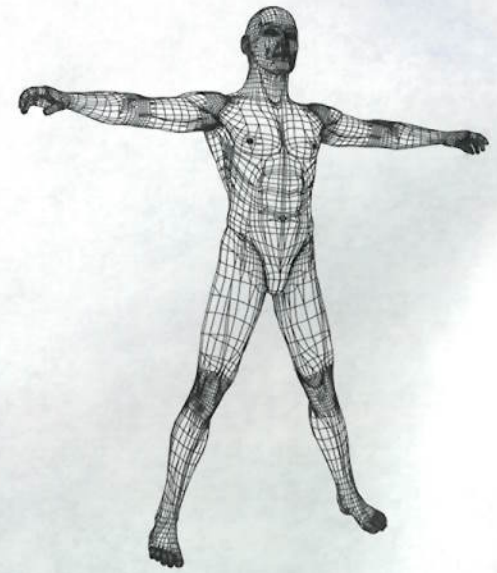
N U R B S

Over 14 months of intense modeling effort has given rise to the most accurate and complete medical quality Nurbs human skeleton on the market today! Our medical modelers have meticulously reproduced a masterpiece from human bone data. Over 200 bones are individually represented with special attention given to articulating surfaces, bony landmarks, and skull foramina. The teeth are a complete set with roots and a proper occlusion. Each of the vertebrae has been individually modeled, and positioned forming an accurate vertebral curvature. This skeleton was built using leading edge modeling techniques to produce tangent surfaces resulting in a model that maintains high accuracy and detail, and is still light enough to use.

Mix & Match Collection





Womens

HC037•woman *13174 polygons* $195
CA043•t-shirt *2928 polygons* $75
CA044•shirt *2791 polygons* $75

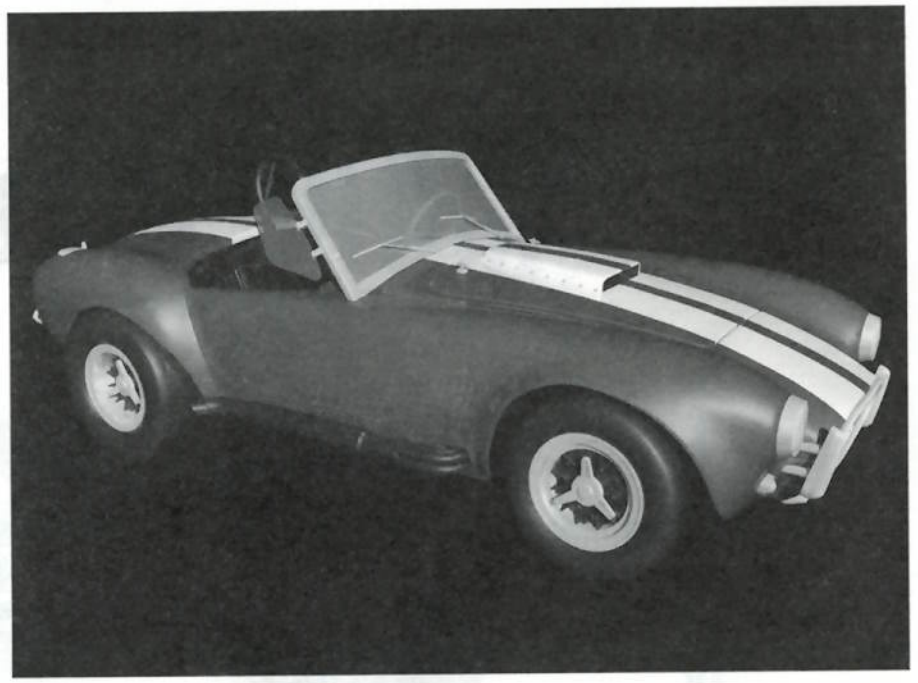
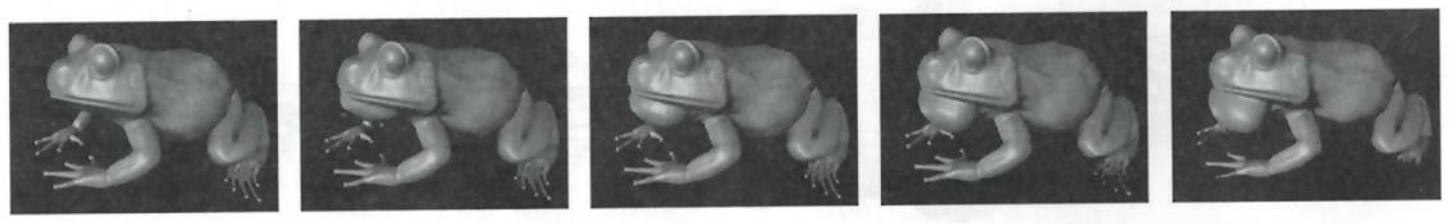
Meticulous mechanical modeling.



Precision and accuracy from digitized data.

Superior NURBS modeling.

Advanced tangency applied to NURBS models.



Morph targets and facial animation. (Even for frogs)

Our nurbs woman was created from human data. The geometry was painstakingly laid out so that it would be efficient and friendly to animate. Areas of tangency are placed away from regions that will undergo extreme deformation during animation. This model was "sewn" together using advanced tangency techniques, and is superior to any other human model being sold.

Do you like what you see? Can you use it? Can you build it for less?

We want to effect your "make or buy" decision by showing you that we can help get your animation project done on time, and under budget without sacrificing quality. We supply a wide range of standard models and custom modeling services. Keep our catalog, check it out from cover to cover, and use it as a resource whenever you need any type of 3D model.
